

NGO Financial Overview (2022 – 2025)

Corina Mocanu

May, 2026

Objective

This project analyzes the financial performance of an NGO over a four-year period (2022-2025), focusing on revenue sources, expense structure, and overall financial sustainability.

- Identify the main sources of revenue
- Analyze how expenses are distributed
- Evaluate financial sustainability over time
- Detect potential financial risks

Tools & Methods

Data preparation

- Excel: data cleaning and preprocessing
- SQL (MySQL): data transformation and integration (UNION ALL, derived fields)

Data modeling

- Created structured categories for revenue and expenses
- Combined datasets into a unified financial table (positive/negative values)

Analysis

- Trend analysis and ratio analysis (expense ratio, net result)

Visualization

- Tableau: dashboards and calculated fields for financial metrics

Revenue and Expense Trends Over Time

- Expense ratio improved from 88% to 71% (2022–2024), then deteriorated in 2025
- In 2025 expenses exceeded revenue, leading to a financial deficit

Revenue and Expense Breakdown by Category

- Membership revenue consistently exceeds € 330 000 per year
- Sponsorship revenue contributes to covering expenses but remains inconsistent
- Personnel costs represent the largest expense category (~61%)

Revenue Distribution by Source

- The organization is dependent on its members
- Sponsorship contributes ~31% but is inconsistent across years
- Other revenue sources (1,2%) are negligible and have minimal impact on the overall financial result

Expense Distribution by Category

- Other expenses (16%) include program activities, operational costs, administrative expenses, and membership fees paid to partner organizations.

Net Result (Profit / Loss)

- In 2025, the organization recorded a loss that represents a financial risk if revenues do not increase

Key insights

- Significant revenue concentration risk: ~68% of revenue comes from membership, while sponsorship (~31%) is volatile
- Other income sources are negligible (~1%) and do not significantly impact financial sustainability
- Personnel costs account for the largest share of expenses (~61%)
- The organization recorded a deficit in 2025, indicating potential financial risk

Conclusions

- The organization is financially stable in most years but relies heavily on membership revenue
- A decline in membership fees or an increase in costs could negatively impact long-term sustainability
- Reducing reliance on membership revenue by diversifying income streams and stabilizing sponsorship should be a priority
